

Dear Sir / Mam ,

I would like to take this opportunity to share my feelings with you about satellite radio. I have been a subscriber for sometime now and would not give it up for anything. Where I live it is hard at times to find a radio station that comes in. And even at their best they do not compare with the sound of XM. It is also very convenient when I 'm traveling. It alleviates the hassle of having to find a new station every couple hundred miles. XM radio has brought a whole world of entertainment to me . From News , sports , and weather to concerts and comedy shows that left my stomach hurting. Satellite has one up on FM radio. Thats the cold reality of it. But that does'nt warrant outlawing it. If someone invented a car that ran on water , oil companies would go bankrupt. But does that mean we should'nt allow it to happen? No , it would bring convenience to people unimaginable , and that is what XM Radio has done for so many others out there like me.
